Seems to function along with eFP2 (By similarity).

SIMILARITY: Belongs to the IF-2 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01-OCT-1996 (Rel. 34, Created)

3B9 was positive. cDNA clones of the 3B9 light and heavy chains were cloned into pGEM7f+ and transformed into E. coli DH5-alpha. A heavy chain cDNA clone was sequenced (AAQ83491) that encoded the protein given in AAR70190. 3 CDRs (AAR70198-200) were identified. (Updated on 25-MAR-2003 to correct PN field.)

New DNA molecules encoding recombinant antibodies useful for treating {\tt IL4}-mediated conditions.
                                                                                                                                                                                                                                        Heavy chain variable region; interleukin-4; IL-4; antibody 3B9; chimeric antibody; humanised antibody; IL-4 mediated allergic reaction; Immunoglobulin B-mediated allergic reaction; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; rheumatoid arthritis; host-versus-graft disease; renal disease; allergy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a complementarity determining region (CDR) of the heavy chain variable region of murine interleukin-4 (IL-4) antibody 319. The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated conjunctivitis, atopic dermatitis, atopic asthma, anaphylactic rhinitis, rheumatoid arthritis, host-versus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans
                                                                                                                                                                                                           CDR of the heavy chain variable region of antibody 3B9.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gross MS;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example 3; Col 47-48; 50pp; English.

Spleen cells from mice immunized with human IL-4 were used to prepare hybridomas, which were screened for anti-IL-4 MAb secretion. Only clone

Disclosure; Page 57; 97pp; English.

Chimeric and humanised IL-4 monoclonal antibodies (mAbs), derived from high affinity mAbs - useful in treatment of IL-4-mediated and IgE-mediated allergic conditions.

WPI; 1995-123387/16.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents a heavy chain complementarity determining region (CDR) from an antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin E (IgE) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                                                                                                                                                                                                                                                    Antibody; interleukin-4; IL4; immunoglobulin E; IgE mediated disease; allergic disorder; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; cell proliferation regulator; therapy; autoimmune disease; graft versus host disease; complementarity determining region; CDR.

ö
idiotypic antibody complementarity-determining region (CDR) or framework-determining region (FR). The antibody binds to human or primate antihumn immunodeficiency virus (HIV) antibodies and can be used in the treatment of HIV infection. The present sequence is a region of the IF?

The present sequence is that of complementarity determining region (CDR) 2 of the heavy chain of murine monoclonal antibody 10D5. Novel humanised antibodies of the invention have CDRs from 10D5 and human framework sequences. These humanised antibodies have binding affinities (affinity and epitope location) approximately the same as those of the mouse 10D5 antibody. The invention includes antibodies, single chain antibodies, and their fragments, as well as nucleotide sequences, vectors, transformed host cells, and methods of using the humanised antibody to treat, prevent, alleviate, reverse or otherwise ameliocrate symptoms and/or pathology associated with Down's syndrome, (pre-)clinical cerebral amyloid angiopathy, and to inhibit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 amyloid, antibody engineering; antibody production; allergy; anyloid-associated disorder; Alzheimers disease; cancer; allergy; autoimmune disease; Parkinsons disease; acquired immune deficiency syndrome; multiple sclerosis; migraine; dementia; infection; nootropic; neuroprotective; cytostatic; antiallergic; Immunosuppressive; antiparkinsonian; antimigraine; antimicrobial; anti-HIV; heavy chain; complementarity determining region.

The invention relates to at least one isolated mammalian amyloid antibody comprising at least one wariable region comprising at least one heavy comprising at least one isolated mammalian amyloid antibody that binds to the same region of an amyloid polypeptide as an antibody comprising at least one heavy can be an antibody comprising at least one between the amino acid sequence of at least one of SEQ ID NO: 73-78, (ii) at least one pirtope call can manibody sequence of an antibody comprising at least one epitope call can manibod acids 2-7, 3-8, 33-42, or 34-40 of a fully defined sequence of 42 amino acids (SEQ ID NO: 5), (iii) an isolated nucleic acid encoding at least one of sequence of SEQ ID NO: 5, 52, 61, 62, 71, 81 and 82 (iv) an isolated nucleic acid encoding at least one did warring at least one buman CDR of a fully defined antibodies mentioned and having at least one human CDR of a fully defined antibodies mentioned and having at least one producing at least one anyloid antibody, (vi) a prokaryotic or everkaryotic host cell comprising an isolated nucleic acid encoding an amyloid antibody, (vi) a method of producing at least one amyloid antibody, (vi) a method of comprising an isolated nucleic acid encoding an amyloid antibody, (vi) a method of comprising at least one of the anyloid antibodies mentioned, (ix) a method of diagnosing or treating an amyloid antibodies mentioned, where the device is suitable for contacting or administering a composition comprising at least one of the anyloid antibodies mentioned, where the device is suitable for contacting or administering an amyloid antibodies mentioned, where the device is suitable for contacting or administering and manibal or transgenic plant or pharmaceutical or diagnostic with, or to, the cell, rissue, organ or animal, (x) a medical device comprising a colution or anyloid antibodies mentioned, where the device is suitable for contactin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 associated disorders, such as Alzheimer's disease, cancer, allergies, autoimmune disease, Parkinson's disease, AIDS, multiple sclerosis, migraine, dementia and infections. This sequence represents a heavy chain
                                                                                                                                              New isolated mammalian anti-amyloid antibodies useful for treating amyloid-associated disorders, such as Alzheimer's disease, cancer, allergies, autoimmune disease, Parkinson's disease, multiple sclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

This invention relates to novel antibodies that bind to the G protein coupled receptor protein identified as GRR64, namely GRR64-1, GRR64-16, GRR64-18, GRR64-18, GRR64-10, and GRR64-18. Specifically, it refers to the use of these anti-GRR64 antibodies as selective cytocoxic agents against GRR64 expressing tumour cells such as those associated with ovarian cancer, uterine cancer and Ewing's sarcoma. The present invention describes epitope mapping of those antibodies that show high affinity binding to GRR64 through competitive binding analyses, such that the antibodies can be used for GRR64 dependent cell death in vitro. Accordingly, they can be used to develop cytostatic compositions for gene therapy or immunotherapy that inhibit cellular proliferation of an ovarian cancerous cell and furthermore can diagnose and inhibit growth of tumour cells. This polypeptide is encoded by a heavy chain variable region DNA sequence of a murine anti-human GRR64 antibody of the invention.
                                                                                                                                                                                           New antibody that inhibits binding of a GPR64 polypeptide to an antibody comprising GPR64-18, GPR64-81, GPR64-93 or GPR64-101, useful in preparing a composition for diagnosing or treating ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Light chain variable region; interleukin-4; IL-4; antibody 3B9; chimeric antibody, humanised antibody; IL-4 mediated allergic reaction; Immunoglobulin E-mediated allergic reaction; allergic rhinitis; ochjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; rheumatoid arthritis; host-versus-graft disease; renal disease; allergy; IS NEW.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              100.0%; Score 95; DB 8; Length 120; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes the variable heavy and light chain regions (I) of murine monoclonal antibody (mAB) 1F7. AAY91014 to AAY91016 represent specifically claimed amino acid sequences of the variable light chain, and AAY91017 to AAY91019 represent specifically claimed amino acid sequence of the variable heavy chain. The antibodies are used for treatment of HIV (human immunodeficiency virus) infection and AIDS (acquired immunodeficiency virus) infection and AIDS HIV in serum and for stimulating HIV antigen related and committed B cells to produce broadly reactive and neutralising antibodies by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Variable heavy and light chain regions of murine monoclonal antibody 1F7, useful for treating HIV infection and AIDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Variable heavy chain protein of murine anti-human GPR64-16 antibody ID15.

This sequence represents the heavy chain of the humanised 3B9 antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin E (IgE) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polynucleotide encoding a complementarity- or framework-determining region of an anti-idiotypic antibody that binds to human or primate antihuman immunodeficiency virus (HIV) antibodies, for use in vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to coding sequences of the murine 1F7 antidiotypic antibody complementarity-determining region (CDR) or framework-determining region (FR). The antibody binds to human or primate antihuman immunodeficiency virus (HIV) antibodies and can be used in the treatment of HIV infection. The present sequence is the 1F7 heavy chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Mouse; 1F7; antibody; immune modulator; anti-HIV antibody; CDR; complementarity determining region; framework-determining region; FR; heavy chain; light chain; HIV infection.

                                                                                                                                                                                                                                             à
                                                                                                                                                                        antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin B-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis, atopic asthima, anaphylactic shock, rheumatoid arthritis, host-versus-graft disease and renal disease. They are also asthritis, host-versus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condittion associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-1 levels in humans. The present sequence represents the heavy chain variable region of Ig NEW, and is used in the course of the

Coupled receptor protein identified as GPR64, namely GPR64-16, GPR64-16, GPR64-18, GPR64-20 and GPR64-48. Specifically, it refers to the use of these anti-GPR64 antibodies as selective cytotoxic agents against GPR64 expressing tumour cells such as those associated with ovarian cancer, uterine cancer and Ewing's sarcoma. The present invention describes epitope mapping of those antibodies that show high affinity binding to GPR64 through competitive binding analyses, such that the antibodies can be assessed to develop cytostatic compositions for gene therapy or immunocherapy that inhibit cellular proliferation of an ovarian cancerous cell and furthermore can diagnose and inhibit growth of tumour cells. This polypeptide is encoded by a heavy chain variable region DNA sequence of a murine anti-human GPR64 antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antibody that inhibits binding of a GPR64 polypeptide to an antibody comprising GPR64-18, GPR64-81, GPR64-93 or GPR64-101, useful in preparing a composition for diagnosing or treating ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Monoclonal antibody; 10D5; complementarity determining region; CDR; mouse; human; humanised antibody; antibody; Alzheimer's disease; Down's syndrome; cerebral amyloid angiopathy; neuroprotective; nootropic.
                                                                                                                                     Variable heavy chain protein of murine anti-human GPR64-18 antibody ID17.
                                                                                                                                                                                                   murine; mouse; antibody; GPR64; cytotoxic; ovarian cancer; uterine cancer; Ewing's sarcoma; cell death; cytostatic; gene therapy; immunotherapy; cellular proliferation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to novel antibodies that bind to the G protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             EXXXXXXXXXXX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes an isolated antibody that binds specifically to a stalk of CD30 of a cell, or to an epitope destroyed upon cleavage of soluble CD30 (sCD30) from intact CD30. Also described: (1) a composition comprising the antibody conjugated or fused to a composition comprising the antibody conjugated or fused to a composition comprising the nucleic acid encoding an antibody that binds specifically to a stalk of CD30 of a cell, or to an epitope destroyed upon cleavage of sCD30 from intact CD30; (3) an expression vector comprising the nucleic acid operably linked to a promoter; (4) inhibiting growth of a CD30+ cancer cell; (5) detecting the presence of a CD30+ cell or a biological sample; (6) a host cell expressing the isolated nucleic acid encoding the antibody having variable heavy and variable light contains; and (7) a kit for detecting the presence of a CD30+ cancer cell in a biological sample comprising a container and an anti-CD30 antibody has cytostatic activity, and can be used in gene therapy. The anti-CD30 antibody that binds specifically to a stalk of the cCD30 is useful for the manufacture of a medicament for inhibiting the growth of a CD30+ cancer cell. The present sequence is used in the ccc exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            · .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antibody that binds specifically to a stalk of CD30 of a cell, or to an epitope destroyed upon cleavage of soluble CD30 (sCD30) from intact CD30, useful for inhibiting the growth of a CD30+ cancer cell.
                                                                                                                                                                                                                                                                                                                                                                                               antibody; CD30; anti-CD30 antibody; cytostatic; gene therapy; cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

```
Spleen cells from mice immunized with human IL-4 were used to prepare hybridomas, which were screened for anti-IL-4 MAb secretion. Only clone 189 was positive. cDNA clones of the 189 light and heavy chains were cloned into pGBM7+ and transformed into E. coli DH5-alpha. The clones were sequenced (AAQ08490-91), and used for antibody engineering. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Heavy chain variable region; interleukin-4; IL-4; antibody 389; chimeric antibody; humanised antibody; IL-4 mediated allergic reaction; Immunoglobulin E-mediated allergic reaction; allergic rhinitis; conjunctivitis; atopic dermatis; atopic asthma; anaphylactic shock; rheumatoid arthritis; host-versus-graft disease; renal disease; allergy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is that of a particularly preferred heavy chain variable region of a humanised antibody of the present invention. In this sequence, the complementarity determining regions originate from murine monoclonal antibody 10D5 and the framework regions originates from human germline VH segment DP-28 and J segment JH4. Novel humanised antibodies of the invention have CDRs from 10D5 and human framework sequences. These humanised antibodies have binding affinities (affinity and epitope location) approximately the same as those of the mouse 10D5 antibody. The invention includes antibodies, single chain antibodies, and their fragments, as well as nucleotide sequences, vectors, transformed host cells, and methods of using the humanised antibody to treat, prevent, alleviate, reverse or otherwise ameliorate symptoms and/or pathology associated with Down's syndrome, (pre-)clinical Alzheimer's disease or (pre-)clinical cerebral amyloid anglopathy, and to inhibit formation or reduce Abeta plaque in the brain. This sequence represents the heavy chain of the murine 189 antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin E (IgE) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                                                                                                                                                                                                 Recombinant IL4 antibodies useful for tratment of allergic rhinitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Humanized antibody; antibody engineering; monoclonal antibody; MAb;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents the heavy chain variable region of murine interleukin-4 (IL-4) antibody 389. The sequences are used in the production chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin B-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis, atopic dermatitis, atopic athma, anaphylactic shock, rheumatoid archritis, host dermatitis, atopic archma, anaphylactic shock, rheumatoid archritis, host diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans
                                                                                                                                                                                                                                                                                                                                                                               DNA molecules encoding recombinant antibodies useful for treating IL4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antibody, interleukin-4; IL4; immunoglobulin E; IgE mediated disease; allergic disorder; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; cell proliferation regulator; therapy; autoimmune disease; graft versus host disease.

A human/mouse chimeric antibody heavy chain variable region was constructed (given in AAR70191) that contained the mouse anti-human IL-4 MAD 3B9 variable region including 3 CRRs (AAR70198-200) and a human antibody signal peptide (AAR70193). The construct was used for humanized antibody production. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                      Chimeric and humanised IL-4 monoclonal antibodies (mAbs), derived from high affinity mAbs - useful in treatment of IL-4-mediated and IgE-mediated allergic conditions.
                                                                                                                                                                                                                                                                                100.0%; Score 95; DB 2; I 100.0%; Pred. This sequence represents the light chain of the chimeric 3B9 antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin E (IgE) mediated diseases. The antibodies are useful for the treatment of alergic disorders such as allergic rhinitis, conjunctivitis, atopic eathma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                 atopic dermatitis, atopic asthma, anaphylactic shock, rheumatoid arthritis, host-versus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans. (Updated on 17-OCT-2003 to standardise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antibody, interleukin-4; IL4; immunoglobulin E; IgE mediated disease; allergic disorder; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; cell proliferation regulator; therapy; autoimmune disease; graft versus host disease.
   B-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Recombinant IL4 antibodies useful for tratment of allergic rhinitis,

             The present sequence represents the heavy chain variable region of a humanised murine interleukin-4 (ILI-4) antibody 3B9. The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma, anaphylactic shock, rheumatoid arthritis, host diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents the heavy chain variable region of murins/human interleukin-4 (IL-4) chimeric antibody 3B9. The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DNA molecules encoding recombinant antibodies useful for treating IL4

chain (LC) or heavy chain (HC) comprising variable region complementarity determining regions from 3D6/10D5 Ig LC or HC variable region sequence, and variable framework region from human acceptor Ig LC or HG sequence. The invention is useful for preventing or treating an amyloidogenic disease or Alzheimer's disease in a patient. The invention is also useful for in vivo imaging amyloid deposits in a patient. The present amino acid sequence represents a mouse 3D6/10D5 variable light (VL) chain or variable heavy (VH) chain protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3D6; heavy chain variable region; immunoglobulin; complementarity determining region; CDR; 10D5; variable framework region; neuroprotective; nootropic; gene therapy; amyloidogenic disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to new humanized immunoglobulin (Ig) light

The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin E (IgE) mediated diseases. The antibodies are useful for the treatment of allergic disorders auch as allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents the heavy chain of the humanised 389 antibody of
                                                                                                                                                                                                                                                                                              Antibody, interleukin-4; IL4; immunoglobulin E; IgE mediated disease; allergic disorder; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; cell proliferation regulator; therapy; autoimmune disease; graft versus host disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   in the treatment of autoimmune diseases and graft versus host disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

The invention relates to a novel humanised immunoglobulin light or heavy chain. The humanised immunoglobulin light or heavy chain comprises:

C wariable region complementarity determining regions (CDR's) from the 3D6 immunoglobulin light chain variable region sequence of 132 amino acids fully defined in the specification (ADR88408), or heavy chain variable region sequence of 131 amino acids fully defined in the specification (ADR88418) or heavy chain variable region sequence of 131 amino acids fully defined in the specification (ADR88418) or heavy chain variable region sequence of 142 amino acids fully defined in the specification (ADR88418) or heavy chain variable region sequence of 142 amino acids fully defined in the sequence, immunoglobulin light or heavy chain sequence, provided that at least one framework residue is substituted with the corresponding amino acid residue from the mouse 3D6 or 10D5 light or heavy chain variable region sequence, where the framework residue is a residue that con-covalently binds antigen directly, a residue adjacent to a CDR interacting residue or a residue participating in the VL-VH interface.

C An antibody of the invention has neuroprofective and nootropic activity, and may have a use in gene therapy. The composition and methods are useful for preventing or treating an amyloidogenic disease, such as three-dimensional image of a 3D6 or 10D5 immunoglobulin, immunoglobulin feavy chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                 New humanized antibodies that recognize beta amyloid peptides, useful for preventing or treating amyloidogenic diseases, such as Alzheimer's

Gaps

The invention relates to at least one isolated mammalian amyloid antibody comprising at least one variable region comprising at least one heavy chain and at least one light chain, of a fully defined sequence of SEQ ID NOS: 48, 49, 59, 60, 69, 70, 79 and 80, respectively. Also described are: (1) at least one isolated mammalian amyloid antibody that binds to the same region of an amyloid polypeptide as an antibody comprising at least one heavy chain or light chain complementarity determining region (CDR) that least one isolated mammalian amyloid antibody, comprising at least one isolated mammalian amyloid antibody, comprising at least one isolated mammalian amyloid antibody, comprising at least one isolated mammalian amyloid antibody comprising at least one isolated mammalian amyloid antibody comprising at least one isolated mammalian amyloid antibody comprising at least one day and a least one of any of the isolated mammalian amyloid antibodies mentioned and having at least one human CDR, vil) a method of sequence of SEQ ID NO: 51, 62, 71, 72, 81 and 82, (11) and encoding an amyloid antibody, (vi) a method of an amyloid antibody, (vi) a prokaryotic or eukaryotic host cell comprising at least one of any of the isolated mammalian amyloid antibodies of an isolated mucleic acid encoding an amyloid antibody, (vii) a composition comprising at least one amyloid antibody, (vii) a composition of an anyloid antibody or fragment that specifically binds at least one anyloid antibodies mentioned, in a method of diagnosing or treating an amyloid antibody or fragment that specifically binds at least one of the antibodies mentioned, where the device comprising at least one amyloid antibody (vii) a composition comprising at least one of the antibodies mentioned, with, or to, the cell, tissue, organ or animal, (x) a medical device comprising at least one amyloid antibody, (xii) an article of mannal, (x) a medical device comprising at least one amyloid antibody, (xii) an article of mannal or anyloid antibody, (xii) an article of m

Monoclonal antibody; 10D5; complementarity determining region; CDR; mouse; human; humanised antibody; antibody; Alzheimer's disease; Down's syndrome; cerebral amyloid angiopathy; neuroprotective; nootropic.
location) approximately the same as those of the mouse 10D5 antibody. The invention includes antibodies, single chain antibodies, and their fragments, as well as nucleotide sequences, vectors, transformed host cells, and methods of using the humanised antibody to treat, prevent, alleviate, reverse or otherwise ameliorate symptoms and/or pathology associated with Down's syndrome, (pre-)clinical Alzheimer's disease or (pre-)clinical cerebral amyloid angiopathy, and to inhibit formation or reduce Abeta plaque in the brain. (Updated on 23-OCT-2003 to standardise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    "light chain variable region, claimed in Claim 4"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New humanized 10D5 antibody, useful for the manufacture of a medicament for treating Down's syndrome, clinical or pre-clinical Alzheimer's disease or cerebral amyloid angiopathy.

inactivated whole S. aureus and subcloning by limiting dilution. It is an example of Mabs of the invention that bind to the peptidoglycan of Grampositive bacteria, and which are useful for treating staphylococcus infrections. The antibodies also bind to whole bacteria and enhance phagocytosis and killing of the bacteria in vitro and block nasal colonisation by Grampositive bacteria in vitro and block nasal MA30 have been cloned and human/mouse chimeric antibodies were produced that have the MI30 variable regions and human constant regions. These chimeric antibodies, referred to as A130, retain the ability to bind to S. aureus peptidoglycan, and are expected to have a reduced human antimouse antibody response in humans

                                               The present sequence is the protein sequence of the heavy chain of a humanised antibody of the present invention. In the variable portion, the complementarity determining regions (CDRs) originate from murine monoclonal antibody 10D5 and the framework region originates from human germline VH segment DP-28 and J segment JH4. Novel humanised antibodies of the invention have CDRs from 10D5 and human framework sequences. These humanised antibodies have binding affinities (affinity and epitope location) approximately the same as those of the mouse 10D5 antibody. The invention includes antibodies, single chain antibodies, and their fragments, as well as nucleotide sequences, vectors, transformed host cells, and methods of using the humanised antibody to treat, prevent, alleviate, reverse or otherwise ameliorate symptoms and/or pathology associated with Down's syndrome, (pre-)clinical Alzheimer's disease or (pre-)clinical cerebral amyloid anglopathy, and to inhibit formation or reduce Abbeta plaque in the brain. The invention relates to humanized immunoglobulin (Ig) light or heavy chains comprising variable region complementary determining regions (CDRs) from the 1284 Ig variable region sequence and variable framework regions from the human acceptor Ig light chain or heavy chain sequence. The humanized Ig light or heavy chain or its nucleic acid molecule is useful for preventing or treating an amyloidogenic disease in humans, associated with amyloid deposits of Abeta in the brain, e.g., Alzheimer's disease, Down's syndrome or mild cognitive impairment, all characterized by cognitive impairment. The variable region sequence is useful in producing a three-dimensional image of a 1284 Ig, 1284 Ig chain or its domain. A humanized antibody is useful for reducing plaque or neuritic burden in a subject. The present sequence represents a mouse 1284 antibody variable heavy chain mature peptide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to humanized immunoglobulin (Ig) light or heavy chains comprishing variable region complementary determining regions (CDRs) from the 12B4 Ig variable region sequence and variable framework regions from a human acceptor Ig light chain or heavy chain sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ઠે
                                                                                                                                                                                                                                                                                                          The present sequence is that of a preferred heavy chain variable region of a humanised antibody of the present invention. In this sequence, the complementarity determining regions (CDRs) originate from murine monoclonal antibody 1005 and the framework region originates from human germanor murine monoclonal antibody 1005 and Josephan Framework sequences. These of the invention have CDRs from 1005 and humanised antibodies and the invention have CDRs from 1005 and humanised antibodies and proximately the same as those of the mouse 1005 antibody. The invention includes antibodies, single chain antibodies, and their ciragments, as well as nucleotide sequences, vectors, transformed host cells, and methods of using the humanised antibody to treat, prevent, alleviate, reverse or otherwise ameliorate symptoms and/or pathology or sessociated with Down's syndrome, (pre-)clinical Alzheimer's disease or (pre-)clinical Alzheimer's disease or (pre-)clinical Alzheimer's disease or credered anyloid anglopathy, and to inhibit formation or content and anyloid and properties of the content and anyloid and the brain. The invention relates to humanized immunoglobulin (Ig) light or heavy chains comprising variable region complementary determining regions (CDRS) from the 12B4 Ig variable region sequence and variable framework regions from a human acceptor Ig light chain or heavy chain sequence. The humanized Ig light or heavy chain or its nucleic acid molecule is useful for preventing or treating an amyloidogenic disease in humans, associated with amyloid deposits of Abeta in the brain, e.g., Alzheimer's disease, bown's syndrome or mild cognitive impairment, all characterized by cognitive impairment. The variable region sequence is useful in producing a three-dimensional image of a 1284 Ig, 12B4 Ig chain or its domain. A humanized antibody is useful for reducing plaque or neuritic burden in a subject. The present sequence represents the humanised 1284WHV1 sequence
humanized Ig light or heavy chain or its nucleic acid molecule is useful for preventing or treating an amyloidogenic disease in humans, associated with amyloid deposits of Abeta in the brain, e.g., Alzheimer's disease, Down's syndrome or mild cognitive impairment, all characterized by cognitive impairment. The variable region sequence is useful in producing a three-dimensional image of a 12B4 Ig, 12B4 Ig chain or its domain. A humanized antibody is useful for reducing plaque or neuritic burden in a subject. The present sequence represents the humanised 12B4VHv1 mature

The humanized Ig light or heavy chain or its nucleic acid molecule is useful for preventing or treating an amyloidogenic disease in humans, associated with amyloid deposits of Abeta in the brain, e.g., Alzheimer's disease, bown's syndrome or mild cognitive impairment, all characterized by a three-dimensional image of a 1284 Ig, 1284 Ig chain or its domain. A humanized antibody is useful for reducing plaque or neuritic burden in a subject. The present sequence represents a mouse 1284 antibody variable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New humanized immunoglobulin light or heavy chains comprising variable region complementary determining regions and variable framework regions, useful for preventing or treating e.g., Alzheimer's disease.

The sequences given in AAR54103-11 are fragments of the heavy and light chains of the humanised monoclonal antibody (MAb) of the invention. The antibody has the ability to neutralise human immunodeficiency virus. The antibody is classified as IgG kappa and has the sequence RIGFGR or RVGPGR in the principal neutralising domain. The antibody may be used to neutralise the clinically separate strains which cannot be neitralised by the neutralising antibodies against IIIB and IIIMN strains
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Recombinant anti-HIV monoclonal antibody - capable of neutralising strains which can not be neutralised by anti-IIIB and IIIMN antibodies.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to humanized immunoglobulin (Ig) light or heavy chains comprising variable region complementary determining regions (CDRs) from the 12B4 Ig variable region sequence and variable framework regions from a human acceptor Ig light chain or heavy chain sequence. The humanized Ig light or heavy chain or its nucleic acid molecule is useful for preventing or treating an amyloidogenic disease in humans, associated with amyloid deposits of Abeta in the brain, e.g., Alzheimer's disease, Down's syndrome or mild cognitive impairment, all characterized by a three-dimensional image of a 12B4 Ig, 12B4 Ig chain or its domain. A humanized antibody is useful for reducing plaque or neuritic burden in a subject. The present sequence represents a chimeric 12B4VH region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New humanized immunoglobulin light or heavy chains comprising variable region complementary determining regions and variable framework regions, useful for preventing or treating e.g., Alzheimer's disease.

The sequences given in AARS4101-02 represent the heavy and light chains respectively of the humanised monoclonal antibody (WAb) of the invention. The antibody has the ability to neutralise human immunodeficiency virus. The antibody is classified as IgG kappa and has the sequence RIGPGR or RVGPGR in the principal neutralising domain. The antibody may be used to the neutralise the clinically separate strains which cannot be neitralised by the neutralising antibodies against IIIB and IIIMN strains. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequences given in AAR54103-11 are fragments of the heavy and light chains of the humanised monoclonal antibody (MAb) of the invention.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a naked binding material which binds to both short consensus complement receptor (SCRI) and SCR2 and/or an active both short consensus complement receptor (SCRI) and SCR2 and/or an active agent as a combined preparation for simultaneous, separate or sequential use in the treatment of cancer. The material and the nucleic acid encoding the material are useful in the preparation of a medicament for the neutralization of CDS5, for the enhancement of complement deposition on a tissue, and for treating cancer, which involve administering the material to the subject, which is ammal. The cancer is one or more of colorectal, breast, ovarian, cervical, gastric, lung, liver, skin and myeloid (e.g., bone marrow) cancer. The material is useful for identifying an agent capable of inhibiting CDS5, which involve bringing into contact a candidate agent with at least a portion of SCRI and SCR2 of CDS5, in the presence of the material which in the absence of the candidate agent; which bind both SCR1 and SCR2 of CDS5, and determining the extent to which the candidate agent inhibits binding of the material to SCR1 and SCR2 of CDS5, and cand/or determining the amount of complement deposition on a cell sample of in the presence and absence of the candidate agent. The agent identified by the assay method is useful in the manufacture of a medicament for the treatment of cancer. The presence represents a CDR sequence for the heavy chain of 105AD7 anti-idiotypic antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

A peptide derived from this antibody contains the 105AD7 heavy chain variable region and a 105AD7 kappa chain. The complementarity determining regions (CDR) of this peptide and its fragments can stimulate immune responses. The peptide can be used for screening for its functional equivalents and mimetics. The peptides, and
antibody has the ability to neutralise human immunodeficiency virus. The antibody is classified as IgG kappa and has the sequence RIGPGR or RVGPGR in the principal neutralising domain. The antibody may be used to neutralise the clinically separate strains which cannot be neitralised by the neutralising antibodies against IIIB and IIIMN strains
                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acid encoding peptide derived from antibody 105AD7 - used to induce an immune response for treatment and prevention of cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAQ70612 codes for human interleukin-6 binding inhibitor, the polypeptide described in AAR58612. This polypeptide ihibits the binding of human IL-6 to its receptor, and can therefore be useful in the treatment of a variety of autoimmune diseases; specifically in the treatment of rheumatoid arthritis, septic shock due to bacterial infection and multiple myeloma. (Updated on 25-MAR-2003 to correct PN field.)
the fragments, equivalents and mimetics are used to stimulate an immune response to a tumour antigen, for the treatment or prevention of tumours. Transfected host cells are used to produce this peptide and the vectors can be used to generate the peptide in vivo for stimulation of an immune stepponse. The peptide contains promiscuous helper epitopses which stimulate a response against tumour antigens other than gp72. These epitopes may help a cytotoxic T lymphocyte response to any co-injected
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Polypeptide inhibiting binding of human interleukin-6 (IL-6) to its receptor - useful for treating auto:immune disease induced or aggravated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ô
                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an engineered CD44 antibody for inducing the differentiation and wither of leukemia cells, the gene in the heavy chain and light chain variable region of monclonal antibody H144a of CD44, the polypeptide coded by said gene, the carrier containing said gene, and the application of said gene and polypeptide in preparing medicines for diagnosing and treating leukemia and disclosed. The present sequence represents the amino acid sequence of the mouse CD44 antibody V segment.

The present invention describes an anti-CD16A antibody (I) comprising a VH domain comprising complementarity determining regions (CDRs) derived from the mouse 308 antibody vight chain or a humanised anti-CD16A derived from the mouse 308 antibody light chain or a humanised anti-CD16A antibody (II) that lacks effector function and comprises all six CDRs of mouse antibody 36B. Also described is a method (M1) for reduction, which involves administering to the mammal in need of such reduction, which involves administering to the mammal a CD16A binding protein comprising an FC region derived from a human IgG heavy chain, where the FC region are response in a modified to reduce binding to an FC effector ligand. (I) and (II) have haemostatic, antirheumatic, antianaemic, vasotropic, nephrorropic, neuroprotective, antiposoriatic, useful for reducing a deleterious immune response in a mammal which involves administering to the mammal (I) or (II). The deleterious immune response is an inflammatory response caused by autoimmune disease such as idiopathic thrombocytopenic purpura (ITP), rheumatoid arthritis (RA), creating to the mammal (I) or (II). The deleterious immune systemic vasculitis, ankylosing spondylitis, Sjogren's syndrome, systemic vasculitis, ankylosing spondylitis, Sjogren's syndrome, (RM), psoriatic arthritis, ankylosing spondylitis, Sjogren's syndrome, and also for treating disease succeptible to treatment with intravenous immuned in mumune in mumune is an inflammatory edges used the propertion of immunoglobuling of the programmatory of the p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  immunoglobulin (IVIG) therapy e.g., allergic asthma. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel anti-CD16A antibody comprising complementarity determining regions derived from mouse 3G8 antibody and humanized anti-CD16A antibody that lacks effector function, useful for treating deleterious immune response.

Novel anti-CD16A antibody comprising complementarity determining regions derived from mouse 3G8 antibody and humanized anti-CD16A antibody that lacks effector function, useful for treating deleterious immune response.

Claim 12; SEQ ID NO 109; 103pp; English.

The present invention describes an anti-CD16A antibody (I) comprising a VH domain comprising complementarity determining regions (CDRs) derived from the mouse 3G8 antibody light chain or a humanised anti-CD16A attibody (II) that lacks effector function and comprises all six CDRs of antibody (II) that lacks effector function and comprises all six CDRs of mouse antibody 3G8 Also described is a method (MI) for reducing a CG16A antibody (II) that lacks effector function and comprises all six CDRs of mouse antibody 3G8 Also described is a method (MI) for reducing a cG16 eleteratious immune response in meman IgG heavy chain, where the Fc region and Fc region derived from a human IgG heavy chain, where the Fc region and Fc region derived from a human IgG heavy chain, where the Fc region antiarthritic, dermatological, immunosuppressive, antiinflammatory, antiarthritic, dermatological and antiasthmatic activities. (I) or (II) is cuspathic, ophthalmological and antiasthmatic activities. (I) or (II) is useful for reducing a deleteratous immune response in a mammal which involves administering to the mammal (I) or (II). The deleterious immune response is an inflammatory response caused by autoimmune disease such as idiopathic thrombocytopenic purpura (ITP), rheumatoid arthritis (RA), systemic lupus erythematosus (SLE), autoimmune haemolytic anaemia (AHA), systemic lupus erythematosus (SLE), autoimmune haemolytic anaemia (AHA), systemic lupus erythematosus (SLE), autoimmune haemolytic anaemia (AHA), systemic arthritis, ankylosing spondylltis, Sjogren's syndrome, Kowasaki's disease, polymyositis and dermatomyositis and also for treating diseases susceptible to treatment with intravenous immunoglobulin (IVIG) therapy e.g., allergic aethma. The present sequence is used in the exemplification of the present invention.

uropathic, ophthalmological and antiasthmatic activities. (I) or (II) is useful for reducing a deleterious immune response in a mammal which involves administering to the mammal (I) or (II). The deleterious immune response is an inflammatory response caused by autoimmune disease such as idiopathic thrombocytopenic purpura (ITP), rheumatoid arthritis (RA), scystemic lupus erythematosus (SLE), autoimmune haemolytic anaemia (AHA), scleroderma, autoantibody trigged urticaria, pemphigus, vasculitis syndrome, systemic vasculitis, Goodpasture's syndrome, multiple sclerosis (MS), psoriatic arthritis, ankylosing spondylitis, Sjogren's syndrome, Rowasaki's disease, polymyositis and dermatomyositis and also for treating diseases susceptible to treatment with intravenous immunoglobulin (IVIG) therapy e.g., allergic asthma. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel anti-CD16A antibody comprising complementarity determining regions derived from mouse 3GB antibody and humanized anti-CD16A antibody that lacks effector function, useful for treating deleterious immune response.

The present invention describes an anti-CD16A antibody (I) comprising a VH domain comprising complementarity determining regions (CDRs) derived from the mouse 3G8 antibody light chain or a humanised anti-CD16A derived from the mouse 3G8 antibody light chain or a humanised anti-CD16A antibody (II) that lacks effector function and comprises all six CDRs of mouse antibody 3G8. Also described is a method (MI) for reducting a deleterious immune response in a mammal in need of such reducting, which involves administering to the mammal a CD16A binding protein comprising an PC region derived from a human 1gG heavy chain, where the Fc region lacks effector function or is modified to reduce binding to an FC effector ligand. (I) and (II) have haemostatic, antirheumatic, antiarthritic, dermatological, immunosuppressive, antiposoriatic, antianeamic, vasotropic, nephrotropic, nephrotropic, networther in a mammal which useful for reducing a deleterious immune response in a mammal which useful for reducing a deleterious immune response in a mammal which involves administering to the mammal (I) or (II). The deleterious immune response is an inflammatory response caused by autoimmune disease such as idiopathic thrombocytopenic purpura (ITP), rheumatoid arthritis (RAh), systemic lupus erythematosus (SLE) autoimmune haemolytic anaemia (AHA), systemic lupus erythematosus (SLE) autoimmune haemolytic anaemia (AHA), systemic vasculitis, ankylosing spondyllitis, Sjogren's syndrome, some and also for treating diseases susceptible to treatment with intravenous immunoglobulin (IVIG) therapy e.g., allergic asthma. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         요
                                                                                                                                                                                                                                                                                                                                    The present invention describes an anti-CD16A antibody (1) comprising a VH domain comprising complementarity determining regions (CDRs) derived from the mouse 308 antibody heavy chain and a VL domain comprising CDRs derived from the mouse 308 antibody light chain or a humanised anti-CD16A antibody (II) that lacks effector function and comprises all six CDRs of couse antibody 308. Also described is a method (MI) for reducting a deleterious immune response in a mammal in need of such reduction, which involves administering to the mammal a CD16A binding protein comprising a deleterious immune response in a mammal at CD16A binding to an Fc region lacks effector function or is modified to reduce binding to an Fc antiarthritic, dermatological, immunosuppressive, antichlammatory, antianaemic, vasotropic, nephrotropic, neuroprotective, antiphsoriatic, uropathic, ophthalmological and antiasthmatic activities. (I) or (II) is useful for reducing a deleterious immune response in a mammal which involves administering to the mammal (I) or (II). The deleterious immune response is an inflammatory response caused by autoimmune disease such as cidopathic thrombocytopenic purpura (ITP), rheumatoid arthritis (RA), systemic lupus erythematosus (SLB), autoimmune haemolytic anaemia (ARA), solleroderma, autoantibody trigged urticaria, pemphigus, vasculitis (RS), psoriatic arthritis, ankylosling spondylitis, Sjogren's syndrome, systemic arthritis, ankylosling spondylitis, Sjogren's syndrome, furnative and dermatomore in minimatory and diseases suceptible to treatment with intravence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            immunoglobulin (IVIG) therapy e.g., allergic asthma. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                         Novel anti-CD16A antibody comprising complementarity determining regions derived from mouse 3G8 antibody and humanized anti-CD16A antibody that lacks effector function, useful for treating deleterious immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 anti-CD16A antibody, mouse, 3G8 antibody, humanised anti-CD16A antibody, immune response, haemostatic; antirheumatic; antiarthritic; dermatological; immunosuppressive; antiinflammatory; antianaemic; vasotropic; nephrotropic; neuroprotective; antipsoriatic; uropathic;
